What was your research question and hypothesis?

Describe the significance of the study problem you addressed, the approach you took, your results, and your conclusions

Describe the potential impact of your results on the field of study. Include any limitations to the study, how they affected potential impact, and how you would address them if you were to continue the project.

What was your role in the project? (e.g., developed research question/hypothesis, literature search, data collection, data analysis, created tables/figures, wrote first manuscript draft, edited manuscript)

Did you use generative artificial intelligence (AI) for any part of your project? If so, please explain how generative AI was used.
